

ACCESSIBILITY EXPRESS

Accessible Documents Made Easy

OVERVIEW

Accessibility Express is a powerful solution that simplifies and automates the process of creating accessible documents. With evolving legislation and increased enforcement of existing laws, it's more important than ever to be in compliance with global regulations. Organizations face potentially large fines if they do not provide communications in accessible formats to the growing population of blind, partially-sighted, and cognitively disabled individuals.

A Complete Document Accessibility Solution

With Accessibility Express you can easily convert documents to multiple formats, making accessible documents an integral part of your ongoing document creation process

The electronic documents can be created in Accessible PDF or Accessible HTML5 so anyone getting their documents online can read them. Your paper documents can be read by anyone using their smartphone with the Voiceye app. Accessibility Express is built on MasterONE, CrawfordTech's ground-breaking architecture. With MasterONE, your Accessibility Professionals only need to do the accessibility design once in the included PRO Designer interface. Then all your paper and electronic versions of that document can be accessible to everyone.

Everything Needed for Document Accessibility

Modules available with Accessibility Express are:

- **Accessible PDF support**
Accessibility Express can create Accessible PDF that is WCAG 2.0 compliant, and it can also create Accessible PDF/UA output. It can work with normal PDF files, or print files in virtually any format and, using tagging rules, convert it to the Accessible PDF format that you need. This can be done before documents are stored in a repository, on it can be done dynamically when the documents are being retrieved for viewing.
- **Accessible HTML5 support**
With Accessibility Express you can create responsive and compliant HTML5 output from already composed print streams, PDF workflows, or document archives.

What does Accessibility Express Do?

Accessibility Express gives you all of the tools you need to easily create accessible documents in multiple formats:

Inclusive Formats:

- Accessible PDF (WCAG 2.0 Level AA, PDF/UA – ISO 14289-1)
- Accessible HTML5
- Voiceye smart phone app

Alternate formats

- Braille
- Large Text
- Audio
- eText
- XML

What is Voiceye?

Voiceye is a unique 2D barcode that contains a document's content in proper read order. A free smart phone application is available for iOS and Android. These apps read the barcode, speak the content aloud using the phones' accessibility features, can drive an attached braille keyboard, enlarge the text, apply various contrast levels, store documents for later use, and more.

Get the app
VOICEYE

- **Voiceye support**

The Voiceye support within Accessibility Express allows you to place a special barcode on your documents containing the document's content. A user can then read that barcode with a free smart phone app. They can enlarge the text, apply contrast techniques to enhance legibility, read the content aloud using the phone's accessibility settings, or even drive an attached braille keyboard.

- **PRO Designer**

A powerful and feature-rich standard component of Accessibility Express, PRO Designer provides a graphical user interface for doing the accessibility design. This includes rules for data extraction, document tagging, alternate text definitions and reading order for your accessible documents.

One Solution — Multiple Formats

Realizing that Accessible PDF, Accessible HTML and Voiceye may not handle 100% of your customers' requirements, Accessibility Express documents can be easily output in any of the traditional "alternate formats" using a standardized process based on the Accessibility Express tagging rules.

Output of traditional alternate formats such as audio or braille can be handled by CrawfordTech's Canadian and U.S. Document Accessibility Services centers, or by any certified MasterONE service provider.

The solution also includes a selection of flexible productivity tools designed to optimize high-volume document output. It accepts all standard print stream formats, with no need to recompose existing output or go back to originating applications. It supports both batch and interactive processing, and has workflow and integration options that allow you to create end-to-end workflows to meet your exact needs.

Inclusion by Design

With Accessibility Express you can provide fully compliant documents to all of your customers – a far better approach to accessibility. This means that everyone is able to access and read important information, either visually, or with assistive technology. You will be in compliance, treat all customers equally, and take advantage of the opportunity to expand into a growing market.

Some quick technical facts:

Pro Accessibility Express runs on all major operating systems:

Windows 2000 and newer, Linux with kernel level 2.6 and higher, AIX, HP-UX UNIX level 11.23 and higher, and Solaris 8 and higher and Linux for System z.PRO

Accessibility Express accepts all standard input formats, including PDF, AFP, PostScript®, PCL and Xerox Metacode.

CrawfordTech Solutions

Crawford Technologies develops software and solutions to help enterprises optimize and improve the secure and accessible delivery, storage and presentation of their customer communications.

With over 1,800 customers on six continents, Crawfordtech solutions and know-how enable the largest banks, insurers, healthcare providers, utilities and print services companies to use their existing technologies, documents and data in new ways. We help them navigate the challenges in leveraging legacy applications in the platforms and applications of the future.

CrawfordTech's products, services and domain expertise reside at the nexus of content, data, and output management and are essential components of our customers' digital transformation, output management and document accessibility strategies.
