

PRO CONCATENATOR

Accurately and Reliably Joins Multiple Print and PDF Files Together

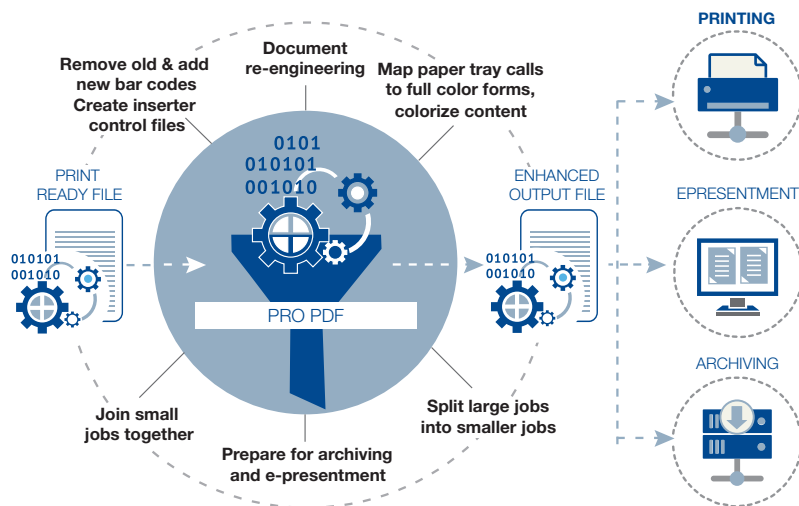

OVERVIEW

PRO Concatenator joins multiple print and PDF files together with the speed, accuracy and efficiency your enterprise demands. CrawfordTech gives you the tools to concatenate several files of the same type, transfer large print files from PC applications to print on more cost effective production-class equipment, improve archive efficiency and more.

With PRO Concatenator you can:

- Accelerate ROI for high speed inkjet printers and finishing technology – make your production faster without changing your upstream composition workflow.
- Save time and money by combining multiple smaller print and PDF files of the same type together to print them more cost effectively on production class equipment as a single larger job.
- Reduce costs by optimizing your print-ready files for production – keep high speed production presses running efficiently by combining small jobs, optimizing batch sizes and minimizing roll changes.
- Re-sequence diverse print jobs and output files to achieve maximum postage rate savings and automated mail processing efficiencies.

Product at a glance

What does PRO Concatenator Do?

PRO Concatenator joins multiple print and PDF files together with the following capabilities:

- Combine multiple input print and PDF files of the same type together
- When used in conjunction with optional PRO Transform products, it joins input files of multiple types and converts them to a single output file type
- Remove duplicate resources when joining multiple files, significantly reducing the resultant file size
- Using your CASS/PAVE software, re-sequences the resultant output file to achieve postage rate savings
- Combines multiple reprint requests into a single reprint run
- Join multiple small PDF archive files together significantly reducing storage space required
- Combine multiple input files from desktop applications so that they may be printed on more cost-effective production technology
- True fidelity

PRO Concatenator fits in your environment

- Easily integrate PRO Concatenator to support both batch and on demand production.
- Leverage existing workflow and automation tools with CrawfordTech APIs.
- Add our PRO Transform products to concatenate several input files of different types.
- Reduce archive storage space by joining many small PDF files into a single PDF file.
- Trim the effort and costs associated with reprints by joining several requests into a single job.

Join multiple print and PDF files together with speed, accuracy and efficiency.

PRO Concatenator runs on all major operating systems:

- Windows
- Linux
- AIX
- HP-UX
- Solaris
- z/OS
- Linux for System z.

PRO Concatenator supports all major print streams:

- AFP (Line data, mixed mode & fully composed)
- Xerox (LCDS & Metacode)
- PCL
- PostScript™
- Line data
