

PRO AFP

Accurately and efficiently convert your AFP print streams

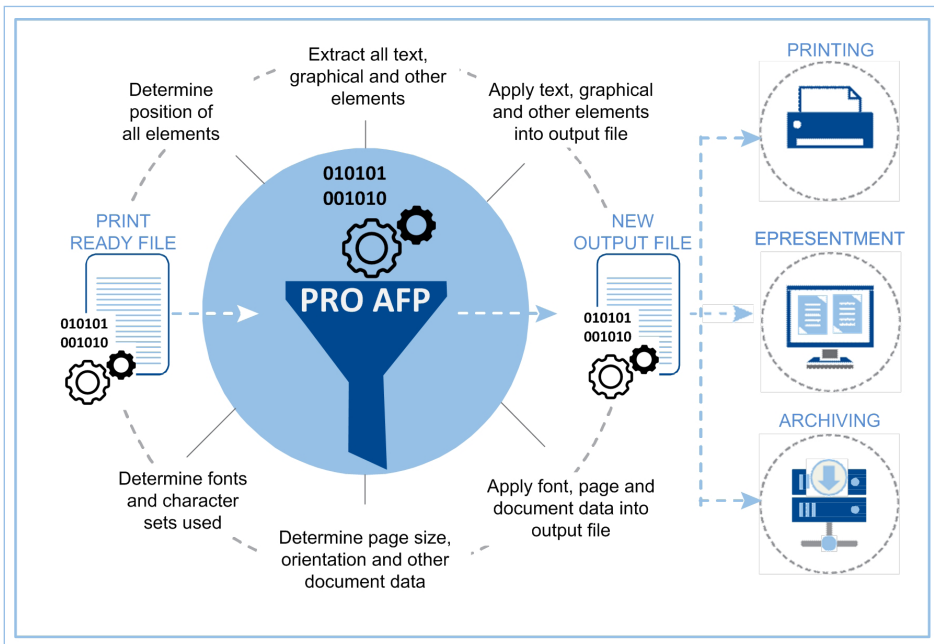

OVERVIEW

PRO AFP Converts your existing AFP print data streams into PDF, PostScript®, PCL, Metacode, HTML5 and more. Whatever your needs, PRO AFP provides a versatile solution that is typically two to four times faster than other products, with the highest conversion fidelity and unrivalled levels of support and quality assurance.

With PRO AFP You Can

- Create output files in PDF for your customers and service agents to view online or to store in document archive.
- Convert native AFP document streams to print on printers using printing formats like PCL or Metacode.
- Create reprints of legacy print applications without production support.
- Reduce file size for archived transactional document streams.

How it Works

What does PRO AFP do?

PRO AFP converts existing AFP data streams into essentially all industry-standard output formats including PDF, PostScript®, PCL, Metacode and line data, with the following capabilities:

- Industry leading speed
- Selective font mapping
- Object-to-object conversion
- True fidelity
- Creation of bookmarks
- Merging in images
- Multiple paper tray applications

All this while setting the industry performance benchmarks for speed, accuracy and flexibility.

Not all AFP files are well structured or optimized for downstream workflows. PRO AFP can also *normalize* an AFP file, which minimizes duplicate fonts, removes duplicated graphical elements and performs further enhancements to minimize storage size and maximize performance in downstream workflows and printing.

Some examples of what PRO AFP can do:

A large print service provider wanted to minimize their storage costs while still presenting documents in PDF format to end customers through a web portal. They use PRO AFP to convert to PDF in real time from their archive.

A large insurance company was having difficulty loading their AFP files into their archive. They used PRO AFP's normalizer feature to restructure the poorly formed files so that their archive could properly ingest and index them.

PRO AFP fits in your environment

- Easily integrate PRO AFP to support both batch and on demand production:
- Leverage existing workflow and automation tools with CrawfordTech APIs.
- Have your output files automatically encrypted for security purposes.
- Suppress blank pages to improve the viewer's experience.
- The PRO Workflow Server option can be used to automate processing of files from hot folders.

Some quick technical facts:

PRO AFP runs on all major operating systems:

- Windows
- Linux
- AIX
- HP-UX
- Solaris
- z/OS
- Linux for System z.

PRO AFP converts your existing AFP print data streams into PDF, PostScript®, Metacode, PCL, HTML5, and line data with the speed, accuracy and efficiency your enterprise demands.
