

# PRO LOCKDOWN

Secure your data for transport and storage with PRO Lockdown

## OVERVIEW

Every organization is on high alert regarding the risk for potential data breaches, and the heavy fines, customer unhappiness, and negative publicity that go with it.

### Why PRO Lockdown?

Are you compliant? This is a question on the mind of governance groups everywhere, and the reality is that many organizations still have gaps when it comes to securing their data and documents once they leave the control of IT managed systems and processes. Though there are few situations that require this information to leave the building, print outsourcing is one that many organizations have opted into. As a result, organizations are not always in complete compliance with regulations such as PCI, HIPAA, and GDPR, as the data owner isn't in control of who handles the communication during the transmission process and once it's transferred to the print service bureau. PRO Lockdown addresses these gaps by encrypting the file and allowing it to only be unlocked by those with the generated password, providing a simple and inexpensive solution to ensure that files stay secure even if intercepted or inappropriately shared with an unauthorized person.

### Advantages

PRO Lockdown makes it easy to manage security of your documents and communications not just at the file level, but down to each individual page. When there is a need to view, edit, or process the file, only the relevant pages are accessed or unlocked so that the file can be quickly processed. In addition, PRO Lockdown:

- Encrypts files for storage and/or transfer
- Each page of output is encrypted and decrypted independent of other pages, allowing steps like reprints to be optimized as well as secured
- Protects sensitive data from being viewed by anyone without a password
- Protects data from document creation through production processing
- Meets the requirements set out by regulations such as PCI, HIPAA and GDPR
- Easily integrates with all post-processing software used in print centers to guarantee security all the way through document printing workflows

With PRO Lockdown, governance and customer experience officers can rest comfortably knowing that their customer's information remains secure no matter where it is sent or stored.

### What does PRO Lockdown do?

- Secures customer files as a whole and at the page level to ensure the information on each page is protected.
- Generates a custom password that can be used to unlock the file.
- Compresses, indexes, and encrypts the file while retaining all of the required printing resources and metadata for all documents in the file.
- Unlocks the file page by page when it reaches the need for processing so that time isn't lost when sent to production.
- Manages who can and cannot unlock the files and what pages they should have access to within the file.
- Archives the encrypted file.

### Some quick technical facts:

- PRO Lockdown runs on all major operating systems: Windows, Linux, AIX, HP-UX, Solaris, z/OS, Linux for System z.
- PRO Lockdown supports all major print streams: AFP (Line data, mixed mode & fully composed), Xerox (LCDS & Metacode), PCL, PostScript™, line data and image files.
